Wisconsin Clean Cities recognizes two decades of successfully reducing dependence on petroleum-based fuels, promoting the use of alternative fuels and technologies, and improving air quality.

Marking this major milestone, WCC strives to make 2014 a year to remember. Currently, some of our projects include:

• Concluding our Wisconsin Clean Transportation Program, a multi-million ARRA grant that will result in 18 new infrastructure sites and over 375 new alternative fuel vehicles in WI;
• Wisconsin Smart Fleets program, a program set out to provide fleets with alternative fuel planning tools and an outline of different options available for their specific situation;
• Lake Michigan Corridor Alternative Fuel Implementation Initiative webinar series;
• Eco-driving training course for class 8 over-the-road trucks;
• Statewide planning for natural gas as an alternative fuel for transportation;
• EV Task Force electric vehicle infrastructure planning;
• Celebrating Wisconsin Clean Cities’ 20th year anniversary and state-wide designation; and
• Education and outreach events for the 2014 calendar year.

Wisconsin Clean Cities recognizes two decades of successfully reducing dependence on petroleum-based fuels, promoting the use of alternative fuels and technologies, and improving air quality.

Your membership will allow us to continue to strive for reduced petroleum consumption, clean air, and an improved quality of life. Along with helping support many projects we are currently working on throughout WI, your membership would also included several benefits:

• Information on upcoming grants that will allow your company to save money on infrastructure, vehicles, or fuel, as well as information about projects and the latest alternative fuels news;
• Support for grant preparation or assistance;
• A representative from your company may serve on our Board of Directors and supporting committees;
• Access to Wisconsin Clean Cities events, which include seminars, meetings, and conferences;
• Networking opportunities with fleets and industry partners;
• Technical training, workshops, and webinars;
• Individual consultation and technical assistance; and
• Public recognition for progress in reducing petroleum consumption and assistance with media outreach.

Together we can “Drive Wisconsin Forward!”

The national RFS program was developed to increase the volume of renewable fuel blended into transportation fuels. As required by the Energy Policy Act of 2005, the U.S. Environmental Protection Agency (EPA) finalized RFS1 program regulations, which became effective on Sept. 1, 2007. The Energy Independence and Security Act (EISA) of 2007 increased and expanded this standard through RFS2, mandating that by 2022, 36 billion gallons of renewable fuel be blended into transportation fuels. Though EISA set final volume requirements, EPA must determine renewable fuel percentage values annually to meet the requirements.

The U.S. Environmental Protection Agency (EPA) and the Energy Department released on December 3 the 2014 Fuel Economy Guide, providing consumers with a resource to identify and choose the vehicles that are the most fuel efficient and emit the lowest amount of greenhouse gases. The 2014 models include efficient and low-emission vehicles in a variety of classes and sizes, ensuring a wide variety of choices available for consumers.

The guide provides “Top Ten” lists allowing consumers to see the most efficient advanced technology vehicles as well as the most efficient gasoline- and diesel-powered vehicles. Consumers will also find a broad range of information in the guide that can be helpful while shopping for a new vehicle - including an estimated annual fuel cost for each vehicle.

ET Environmental Wraps Up Report That Covers NGV Maintenance Facilities

ET Environmental Corp. LLC has completed work on developing guidelines and best practices for natural gas vehicle (NGV) maintenance facilities in Wisconsin - an assignment that the company began on behalf of the Wisconsin State Energy Office in April.

The “Natural Gas for Transportation Vehicle Repair Garage Guidelines” report, available in its entirety on www.wicleancities.org/resources.php, offers fleet technicians, maintenance facility managers and other stakeholders various processes and checklists for upgrading existing maintenance facilities to comply with building code requirements for compressed natural gas (CNG) vehicles. The goal of the report was to help facility managers and owners modify their shops in a cost-effective and efficient manner.

“We appreciate the thorough job ET Environmental did on this project,” says Kevin Vesperman from the state’s Division of Energy Services. “It moves the ball forward on adoption of CNG as a transportation fuel in Wisconsin.”
January 7
WSF Website Launch
The State Energy Office and Wisconsin Clean Cities launch a new program to define the label of what it means to be a Wisconsin Smart Fleet (WSF). The program aims to help fleets reduce their carbon footprint and meet internal economic goals, as well as give them Smart Fleet branding. Check out the WSF website at www.wismartfleet.org.
